## Recent LHCb results on baryonic B decays

Saturday, 13 December 2025 10:40 (20 minutes)

This talk is to cover the following recent LHCb results based on full or part of Runs1-2 data sets: first observation of  $B^0 \rightarrow p\bar{p}p\bar{p}$ , and evidence of  $B_s^0 \rightarrow p\bar{p}p\bar{p}$ ; first observation of  $B^+ \rightarrow \bar{\Lambda}p\bar{p}p$ , and study of threshold enhancement effects in the final state; first observation of  $B^+ \rightarrow \bar{\Lambda}p$ , and measurement of its decay parameter; first evidence of FCNC decay of  $B^+ \rightarrow \bar{\Lambda}p\mu^+\mu^-$ . The prospects of studying other baryonic decays, especially those with a final-state  $\bar{\Lambda}p$  pair, will also be discussed.
