

## Non-Abelian Domain walls: oreo and CP violation

*Monday, 20 April 2026 14:20 (25 minutes)*

The spontaneous breaking of an  $A_4$  flavour symmetry can lead to the formation of domain walls. We study this phenomenon in the scenarios of real and complex  $A_4$  symmetric scalar theories and discover new kinds of domain walls, which we denote as “oreo”-type composite domain walls and CP-violating domain walls.
