Searches for Charged Lepton Flavour Violation at Belle and Belle II

The Belle and Belle II experiments have collected a 1.6 ab^{-1} sample of e^+e^- collision data at center-of-mass energies near the $\Upsilon(nS)$ resonances. We present searches for the decays $\tau \rightarrow \mu\gamma$, $\tau \rightarrow \ell\eta$, $\tau \rightarrow \ell\pi^0$, and $\tau^- \rightarrow \ell^- \alpha$, where $\ell = e$ or μ and α is an invisible scalar particle. In addition, we present results of searches for $\chi_{bJ} \rightarrow e\mu$, $e\tau$, and $\mu\tau$, as well as $B \rightarrow K\ell\tau$ ($\ell = e, \mu$).
