Progress of the MELODY project

Muon station for sciEnce technOLOgy and inDustrY (MELODY) is the first muon source project in China. It aims at both fundamental muon physics and muon applications in various fields. In phase I we will construct a surface muon beam with one muSR spectrometer and one test beam port for technology development and possible muon physics experiment. We also reserve the tunnel for a decay muon beamline and a dedicated negative muon beamline. In this work we present the progress of the project and welcome collaborations from all the world.
