Educational Projects at Platform for Muon Science and Technology

As second-generation leptons, muons play an important role in both fundamental research and a wide range of technological applications. The Platform for Muon Science and Technology at Sun Yat-sen University focuses on muon-related research and educational programs aimed at training future experts in the field. In this talk, we will introduce the current status of the platform, including its research projects and education programs. We will also discuss ongoing developments and opportunities for potential collaboration in muon science and technology.
